

A post-doctoral position starting on September 1st, 2020 is currently open in the laboratory of angiogenesis and cancer microenvironment INSERM Unit 1029 at the University of Bordeaux in the field of tumor angiogenesis and metastasis.

The proposed post-doctoral project, dealing with the processes of invasion and metastasis will be conducted within the dynamic interaction between fundamental and clinical research. During the first year of the project (potential additional 1 year), the candidate will investigate the effect of a newly identified tumor suppressor marker by our team in tumor progression and angiogenesis.

Highly motivated candidates with excellent experimental knowledge in the field of molecular and cellular biology and biochemistry, please send your letter of motivation and full CV to geraldine.siegfried@inserm.fr

An experience with the zebrafish model is very welcome.
